

Teams up with glyphosate for greater results

Get Outstanding Control of Tough Broadleaves and Excellent Flexibility with new Cadet® Herbicide

Adding Cadet® herbicide to every tank of glyphosate is an excellent way to enhance your postemergence weed-control program. Cadet helps control glyphosate-tolerant weeds and provides an additional mode of action to aid in resistance management. Cadet is the ideal tank-mix partner, and it's labeled for use on corn and soybeans, allowing you more efficient use of time and resources. With no residual concerns, no crop rotation concerns, excellent crop safety and cost-effective control, Cadet belongs in every tank of glyphosate, every time.

Control of these tough weeds

Velvetleaf
Waterhemp
Lambsquarters
Pigweed
Nightshade
Jimsonweed
Burdock
Spurred anoda
Morningglory

Practical solution to build a solid defense against weeds

Cadet herbicide:

- Controls many ALS- and glyphosate-tolerant weeds
- Combining Cadet with glyphosate broadens the weed spectrum controlled and can reduce the risk of weeds building up herbicide resistance
- Provides excellent postemergence activity on tough broadleaf weeds including velvetleaf, lambsquarters, nightshade and pigweed species
- Labeled for use on both corn and soybeans, so there is no need to change the rate or rinse equipment when switching crops

Usage Rates & Application Timing

Tank mixed with a glyphosate or other postemergence broadleaf herbicides— 0.4 to 0.5 oz/A

Used alone or with postemergence grass herbicides – 0.6 to 0.9 oz/A

Corn – Apply from 2-leaf up to 48-inches tall

Soybeans – Apply from 1-trifoliolate through full flowering

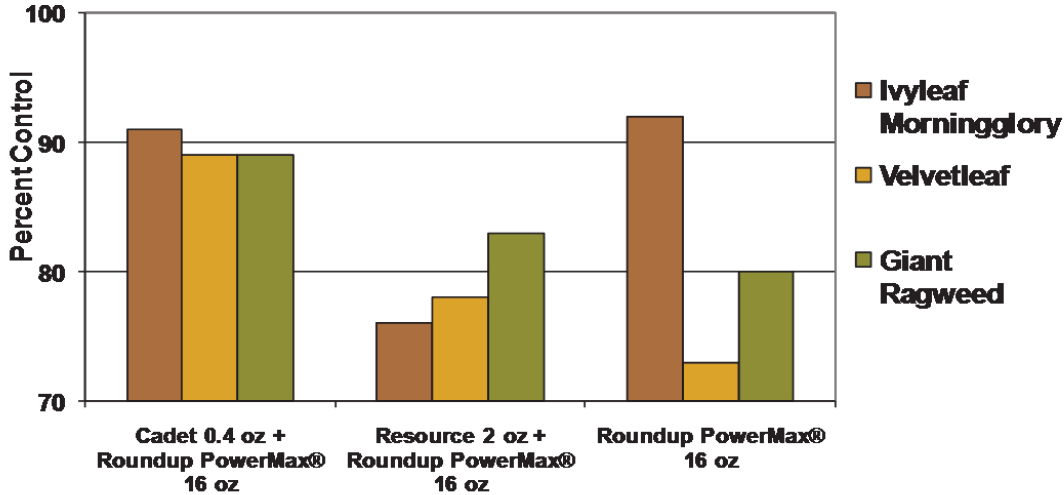

Pre-Harvest

Soybean — 60 days

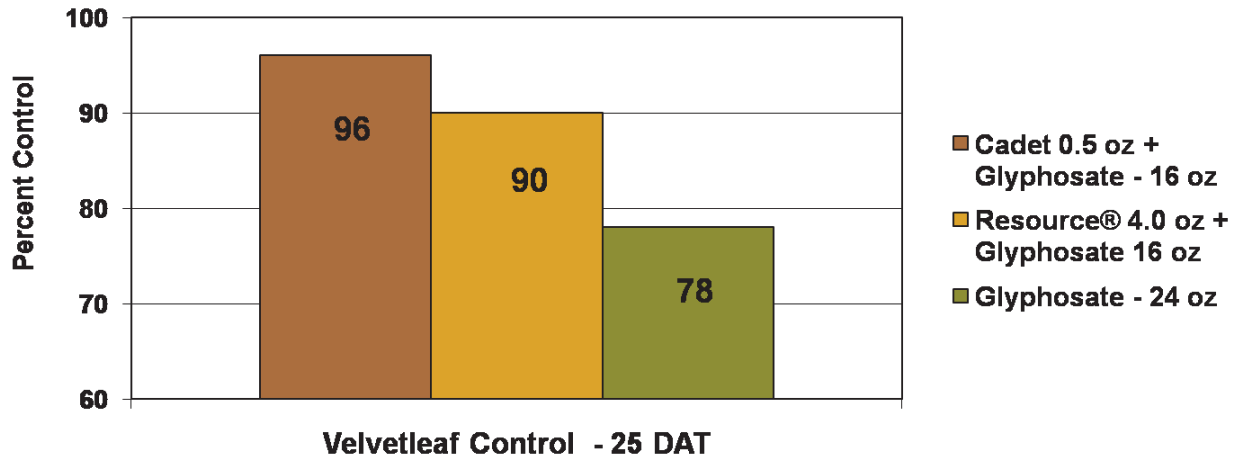

Corn — 90 days

Cadet® Herbicide in Combination with Glyphosate Delivers Enhanced Weed Control
